SUMMARY

Software Engineer focused on building scalable, observable, and fault-tolerant distributed systems, with an AI-first mindset and experience building AI-powered tooling to improve reliability and reduce operational toil.

EDUCATION

Master of Science - Data Science | University at Buffalo, The State University of New York **Aug 2022 - Dec 2023**

Relevant Coursework: AI & Machine Learning, Cloud Computing, Python, Big Data Technologies, Data Structures and Algorithms

TECHNICAL SKILLS

Observability & Telemetry: OpenTelemetry, Grafana, Loki, Prometheus, ELK Stack, Observe

Cloud & Infrastructure: Kubernetes, OpenShift, AWS, Docker, Terraform, Helm, Vault, Redis

CI/CD & GitOps: GitLab CI/CD, ArgoCD, Jenkins, Ansible

Languages & Frameworks: Python, Bash, JavaScript, FastAPI, React, PostgreSQL, MySQL, GO, Shell

EXPERIENCE

Barclays | Software Engineer, Infrastructure

Feb 2024 - Present

- Deployed and configured an open-source distributed system (Loki), tuning read, write, and backend components to support multi-tenant log aggregation and persistence to object storage.
- Built a Kafka-consuming OpenTelemetry Collector service to stream high-throughput log data into the storage pipeline, supporting 1,000+ teams globally.
- Implemented Redis caching to optimize query performance, reducing query latency by 40%.
- Implemented SLO/SLI dashboards and error budget tracking in Grafana, improving reliability visibility across the observability platform.
- Architected an event-driven onboarding platform on Kubernetes, using Kafka for asynchronous processing and MongoDB for state tracking, cutting onboarding time from 4 hours to 15 minutes (75% reduction) across several thousand applications.
- Migrated 50+ scheduled jobs from GitLab to Kubernetes CronJobs, standardizing secret management via HashiCorp Vault and establishing observability standards across the platform.
- Developed REST APIs with session and token-based authentication, consumed by 1,000+ internal teams, handling 10K+ requests/day.
- Maintained a centralized Helm chart repository with environment-specific values, using ArgoCD for GitOps-based deployment across multiple environments and regions.
- Built an AI-powered troubleshooting agent (AWS Strands Agents) that orchestrates custom tools to search cross-service logs and pinpoint root cause from a request ID, reducing MTTR by 35%.
- Led a technical initiative to eliminate tech debt and improve reliability of scheduled workloads, collaborating with 4 engineers across the full development lifecycle.

Faurecia | Software Engineer, Cloud

Jul 2020 - Aug 2022

- Containerized legacy Python FastAPI applications and migrated them to Kubernetes, packaging deployments as Helm charts for EKS.
- Provisioned and managed EKS clusters via Terraform, including networking and infrastructure configuration across development, QA, and production environments.
- Built standardized CI/CD pipeline templates with integrated unit and integration testing, automating deployments to AWS EKS.
- Instrumented applications for full-stack observability, building Elastic (ELK) dashboards and alerting.
- Led on-call incident response and blameless postmortems, maintaining operational runbooks and communicating directly with customers during production issues.

PROJECTS

- Built a personal AI chatbot using the OpenAI API, feeding LinkedIn profile data as context to answer questions about my professional background. **(Digital Twin Chatbot)**
- Built an AI-powered Kubernetes reliability platform (Minikube) using the OpenAI API to correlate logs, metrics, and events for automated root cause analysis and remediation recommendations. **(KubeHeal)**

CERTIFICATIONS

AWS Certified Cloud Practitioner • AWS Certified Developer Associate • Ansible Automation Platform • Claude
